

PREFERRED
CLOUD PLATFORM 

**Choose the Platform with Better
Security. Integration. Insight.**

With simple installation and a completely secure network, the Preferred Cloud gathers information about on-site equipment, presents the data on an easily accessible web page, and sends alerts and updates to mobile phones or computers with optional analytics.

Preferred Cloud

Competition

- Operates on a private cellular network operated by Verizon that isolates our network gateways from the Internet.
- Allows for integration of any equipment that has Modbus communications.
- Constantly streams high resolution data allowing for detailed analysis of startup flame failures and other problems.
- Optionally stores data for extended periods of time to allow for data comparison from last heating season.
- Allows for complete customization of alarms and notifications including phone calls.
- Collects over 150 data points from a single boiler.
- Allows for advanced data analytics that can detect a multitude of problems automatically.

- Configuration interfaces exposed to the Internet or local networks, potentially weakening the security of your facility.
- Remote monitoring support limited to a single brand's equipment.
- Low resolution updates that do not allow for detailed analysis.
- Limited data retention.
- Only allows for simple alarms and no phone calls.
- Inflexible system with limited data collection.
- No data analytics.
